

European training network EU-HOU for high school teachers

Emmanuel Rollinde

Institut d'Astrophysique de Paris, Francuska

Sažetak

Coming from France to Croatia to start an european Erasmus+ project, I am glad to talk about our expertise in teacher training. We started the european training network called EU-HOU about ten years ago. It has an expertise in training high school teachers in the field of astronomy, using dedicated pedagogical tools and activities based on research methodology, such as, a data analysis software, a network of remote radio-telescopes. More recently, we have investigated the enaction principle defined in cognitive science and applied to pedagogy. I will describe our tools and pedagogical principles and explain what we expect to start with this new european project involving Croatia.
